Drinking Straw PLA 210x8 mm 23x150 pieces

The PLA drinking straws, 210 mm long and 8 mm in diameter, offer a practical alternative to conventional plastic straws. They are made of polylactic acid (PLA), a bio-based plastic produced from renewable raw materials. Thanks to their sturdy shape and pleasant length, they are ideal for cold drinks such as cocktails, long drinks, soft drinks, juices and smoothies. The straws are especially practical for restaurants, bars, cafés, hotels, catering and events. The bulk pack of 23 packs of 150 pieces, 3'450 straws in total, is an economical solution for daily use in the catering trade.

Artikelnummer	60039
