Drinking Straw PLA 250x8 mm 14x150 pieces

The PLA drinking straws, 250 mm long and 8 mm in diameter, offer a practical alternative to conventional plastic straws. They are made of polylactic acid (PLA), a bio-based plastic produced from renewable raw materials. Thanks to their sturdy shape and extra-long design, they are ideal for cold drinks such as cocktails, long drinks, soft drinks, juices and smoothies. They are a practical choice especially for tall glasses. The straws are ideal for restaurants, bars, hotels, catering and events. The bulk pack of 14 packs of 150 pieces, 2'100 straws in total, is an economical solution for daily use in the catering trade.

Artikelnummer	60040
