Drinking Straw PLA 150x8 mm 12x250 pieces

The PLA drinking straws with a length of 150 mm and a diameter of 8 mm offer a practical alternative to conventional plastic drinking straws. They are made of polylactic acid (PLA), a bio-based plastic produced from renewable raw materials. Thanks to their sturdy shape, they are ideal for cold drinks such as cocktails, soft drinks, juices and smoothies. The drinking straws are especially practical for restaurants, bars, cafés, catering and events. The bulk pack with 12 packs of 250 pieces each, 3'000 drinking straws in total, offers an economical solution for everyday use in the hospitality industry.
